

FAST-PACED CHEMISTRY COURSE OF STUDY

Textbook: Prentice Hall's *Chemistry* (2002 edition) by Wilbraham et al

DAY 1	WHAT (skill goals, knowledge goals, concepts)	HOW (activities)
morning	<p>Introduction: The nature of scientific investigation, how scientists solve problems.</p> <p>Introduction to Chemistry: the study of matter -definition of matter, states of matter, changes of state.</p> <p>Classification of matter-pure and impure substances, heterogeneous and homogeneous. The properties of matter-physical and chemical</p>	<p>Cooperative puzzle solving, Demonstration of the scientific method.</p> <p>Running shoe demo. Questions Page (58-9) – 36,37,39,42,46,54,56</p>
afternoon	<p>Changes in matter-physical and chemical Indicators of chemical change. Law of Conservation of Mass.</p>	<p>Use of the Bunsen burner (questions - Page (46-55) – 9,10,14,18,19,24,32,34 Student Lab</p>
evening	<p>The use of mathematics in science - scientific notation, significant figures (rules), rounding off.</p> <p>Units used in measurement - length, volume, mass, density, time, temperature. Conversions within the metric system.</p> <p>Review problems Page (91-93) – 46,47,48,49,53,54,55</p>	<p>Activity to practice measurement - estimation, limits imposed by measuring devices, etc. (questions - Page 69 – 3,4 Page 79 – 23,24,25 Page 83 – 30, 31,32,33</p>

DAY 2	WHAT (skill goals, knowledge goals, concepts)	HOW (activities)
morning	<p>The history of atomic structure - the models of the atom proposed by Dalton, Thomson, Rutherford.</p> <p>The fundamental sub-atomic particles - protons, electrons, neutrons.</p> <p>Definitions of atomic number, mass number, isotopes, atomic mass.</p> <p>The Periodic Table - history of its development. Use of atomic number rather than atomic mass. Definitions of family groups, periods. Positions of metals, non-metals and metalloids</p>	<p>Black Box demo</p> <p>Page (111-113) – 15,16,17,18,19,20</p> <p>Page (116-117) – 21,22,23,24</p> <p>Page 122 – 50,65</p>
afternoon	<p>How atoms combine - simple introduction to the formation of molecules and ionic compounds. Definitions of anion and cation. (Relation of noble gases to chemical reactivity of metals and non-metals, formation of ions, ionic charges)</p> <p>Law of Definite proportions</p>	<p>Lab to find the % water in bluestone</p>
evening	<p>Chemical nomenclature - binary compounds - simple monovalent ions.</p> <p>Multivalent elements - use of prefixes, classical suffixes, Stock system.</p> <p>Polyatomic ions - nomenclature of ternary compounds.</p> <p>Nomenclature of acids.</p>	<p>Chemical “Boggle”</p>

DAY 3	WHAT (skill goals, knowledge goals, concepts)	HOW (activities)
morning	<p>Introduction of the mole in its three modes - as a counting number, as a mass and as a volume.</p> <p>Page (290-302) – 3,4,5,6,7,8,17,19,21,22</p> <p>% composition of compounds. Page (306-307) 32,33,34,35</p> <p>Empirical and molecular formula. Page (310-312) -36,37,38,39,45</p>	<p>Activity to illustrate moles of various materials.</p> <p>empirical formula of magnesium oxide</p>
afternoon	<p>Types of chemical reactions: combination, decomposition, single and double replacement, combustion.</p> <p>Page (327-329) – 3,4 ,5,6,10,11,12 Page (331-337) – 13,14,15,16,17,18,19,20,21</p>	<p>Demos: Zn/S combination, HgO decomposition, Aluminum and mercury chloride.</p> <p>Student lab to illustrate all types of reactions.</p>
evening	<p>Chemical equations - word equations, skeleton equations, balanced chemical equations.</p> <p>Solubility rules - ionic and “net ionic” equations</p>	<p>Page 344 -32,33,34,35</p>

DAY 4	WHAT (skill goals, knowledge goals, concepts)	HOW (activities)
morning	<p>Stoichiometry - chemical calculations</p> <p>Interpreting chemical equations in quantitative terms. Problem solving involving moles, mass and volume. Page 360 – 11,12,13,14,15,16,17,18 Page 366 - 24</p>	<p>Student lab - reaction of steel wool and copper II sulfate solution to verify mole ratio.</p> <p>Decomposition of a hydrated salt to identify it.</p>
afternoon	<p>Concept of limiting reagent Page (370-371) -25,26,27,28 % yield of a reaction Page (374-375) – 29,30,31,32</p>	<p>Demo of limiting reagent using magnesium and hydrochloric acid</p>
evening	<p>The States of matter (chapter 10)</p> <p>Kinetic molecular Theory - application to the three states of matter.</p>	

DAY 5	WHAT (skill goals, knowledge goals, concepts)	HOW (activities)
morning	<p>Gases and Gas behavior - dependence of volume on temperature pressure and amount of gas.</p> <p>The Gas Laws - graphical analysis of data to establish Boyle’s Law ($PV = k$), Charles’ Law ($V/T = k$)</p> <p>Gay-Lussac’s Law ($P/T = k$)</p> <p>The combined Gas Law. Page (418-425) – 7,8,9,10,11,12,13,14,20,21,22,23,24</p>	<p>Demo to show how the volume of a gas can be changed.</p> <p>Student labs - to derive data for Boyle’s and Charles’ Laws.</p>
afternoon	<p>Avogadro’s Law</p> <p>Dalton’s Law of Partial Pressure Page 434 -31 32 , Page (439-441) – 61,62,63,76,83</p> <p>Graham’s Law of Diffusion</p>	<p>Problems involving all the gas laws.</p> <p>Student lab - to find the molar volume of hydrogen gas.</p>
evening	<p>The Ideal Gas Law ($PV = nRT$)</p> <p>derivation and use of the equation to solve problems Page 439 – 43,46,47,48,51,55,56,57,58</p>	<p>Student lab - to find the molar mass of butane gas.</p>

DAY 6	WHAT (skill goals, knowledge goals, concepts)	HOW (activities)
morning	<p>Modern Atomic Theory - review models of the atom (Dalton to Rutherford)</p> <p>Extension to the model to the Bohr atom. Drawing representations of atoms using the Bohr model.</p> <p>Limitations of the Bohr model - uncertainty, wave nature of matter, etc.</p> <p>Extension of model to quantum mechanical model based on probability.</p> <p>Introduction of atomic orbitals - principal energy levels, shapes of atomic orbitals (s, p, d and f)</p>	<p>Flame tests for various metallic ions to verify electron promotion, etc.</p> <p>Spectrum tubes to illustrate unique spectral "fingerprints" of some elements.</p>
afternoon	<p>The electron arrangement of atoms.</p> <p>Rules for filling orbitals - Aufbau principle, Pauli exclusion, Hund's rule.</p> <p>Exceptions to the rules</p>	<p>Page 135 – 8,9</p> <p>Page 149 – 30,32,33,34,35,36,39</p>
evening	<p>The Periodic Table revisited - based on the electron arrangement of the atoms.</p> <p>Trends in the Periodic Table - atomic and ionic radius, Ionization Energy, electronegativity.</p>	<p>Page 181 – 27, 30, 35, 36, 37, 38, 39, 40,41,42,43,46</p>

DAY 7	WHAT (skill goals, knowledge goals, concepts)	HOW (activities)
morning	<p>Chemical Bonding - use of electron-dot diagrams</p> <p>Formation of ions - ionic bonding</p> <p>The properties of ionic compounds and their relationship to the strength of the bonds. (i.e. Melting points, solubility, electrical conductivity)</p> <p>Metallic bonding - the nature of the metallic bond and the factors affecting its strength. The relationship of bond strength to the properties of metals.</p>	<p>Student lab to examine the properties of substances in relation to their bonding.</p>
afternoon	<p>Covalent bonding - the nature of the covalent bond.</p> <p>Formation of single and multiple bonds.</p> <p>The coordinate covalent bond.</p>	<p>Model building exercises to demonstrate the bonding and shapes of covalent compounds</p>
evening	<p>The Shapes of molecules.</p> <p>Describing the shapes of molecules using VSEPR theory.</p> <p>Explanation of the shapes of molecules using hybrid atomic orbitals. Also explanation of multiple bonds.</p> <p>The polarity of molecules and extensions to intermolecular forces like dipole forces, hydrogen bonds and Van Der Waal's forces.</p>	<p>Page (220 – 239) – 7, 8, 9, 10, 11, 12, 26, 27, 28, 30, 31</p> <p>Page 247 – 50, 54, 56, 64, 65, 67, 68, 69, 70</p>

DAY 8	WHAT (skill goals, knowledge goals, concepts)	HOW (activities)
morning	<p>Water - its importance and unique properties - high melting and boiling points, density, high heat capacity, surface tension, etc.</p> <p>Solutions - defined as homogeneous mixtures</p> <p>Solutes and solvents. Various types of solutions.</p> <p>The dissolving process. Hydration of ions.</p> <p>Electrolytes and non-electrolytes</p> <p>Water of hydration. Efflorescence and deliquescence. Practical uses.</p>	<p>Student experiments and demos to show the unique properties of water.</p> <p>The Acetone "race"</p> <p>Student experiment to illustrate the electrical conductivity of solutions.</p> <p>Demo of water absorption by ASAP</p>
afternoon	<p>Rates of dissolving - factors affecting the rate of dissolving.</p> <p>Quantitative aspects of solubility. Solubility curves. Saturated, unsaturated and supersaturated solutions. Solubility of gases.</p>	<p>Student activity to show the formation of a supersaturated solution.</p> <p>Page (499 – 501) – 47, 77, 82</p>
evening	<p>The concentration of Solutions.</p> <p>Expressed as % solution.</p> <p>Molarity of solutions.</p> <p>Colligative properties of solutions. Practical applications of elevated boiling points and depressed freezing points.</p>	<p>Page (481 – 486) – 8, 9, 10, 11, 12, 13, 14, 15, 19, 20, 21</p> <p>Page 499 – 45, 46, 51, 52, 57</p> <p>Page 501 – 89, 91</p>

DAY 9	WHAT (skill goals, knowledge goals, concepts)	HOW (activities)
morning	<p>Thermochemistry - endothermic and exothermic reactions.</p> <p>Changes of state - heats of fusion and vaporization.</p> <p>Calorimetry - measuring the heats of reaction</p> <p>Thermochemical equations</p>	<p>Demos to illustrate terms</p> <p>Student labs:</p> <p>Heat of fusion of Ice</p> <p>Heat of combustion of paraffin.</p> <p>Heat of solution of ammonium nitrate and sodium hydroxide</p> <p>Mathematical problems involving calorimetry</p>
afternoon	<p>Standard Heats of Formation</p> <p>Hess's Law. Finding heats of reaction.</p> <p>Relation of heat of reaction to stability</p> <p>Bond Energy and Heats of reaction</p> <p>Entropy and Free Energy. Reaction spontaneity.</p>	<p>Student lab to illustrate Hess's Law - Heat of neutralization.</p> <p>Page (510 – 532) – 4, 14, 15, 18, 19, 21, 22, 23, 24, 25, 26, 32, 33, 35, 37</p> <p>Page (535 -537) – 56, 58, 59, 67, 71, 72, 74, 75, 85</p>
evening	<p>Nuclear Energy.</p> <p>Symbols of particles. Nuclear equations.</p> <p>Types of radioactive decay - alpha, beta and gamma.</p> <p>Half-life</p> <p>Types of nuclear reactions - transmutation, fission and fusion.</p>	<p>Page (806 -808) – 7, 8, 12, 13, 14</p> <p>Page 822 – 47, 49, 50, 52, 58</p> <p>Page 823 – 74</p> <p>Page 825 – 2, 4, 5, 6, 7, 8</p>

DAY 10	WHAT (skill goals, knowledge goals, concepts)	HOW (activities)
morning	<p>Reaction Kinetics - the rates of reaction</p> <p>Definition of rate of reaction</p> <p>The measuring of reaction rates - initial rate, instantaneous rates, average rate.</p> <p>The factors affecting the rate of reaction - concentration, temperature and catalysis.</p> <p>Expand to include nature of reactants, surface area and pressure (for gases)</p>	<p>Demo to illustrate different reaction rates.</p> <p>Student lab: measuring the rate of the reaction between marble chips and hydrochloric acid. Graphical analysis.</p> <p>Student lab: factors affecting rate. Potassium permanganate and oxalic acid.</p>
afternoon	<p>Collision theory as an explanation for the factors affecting rate.</p> <p>Development of the Rate Law expression.</p> <p>Potential energy graphs to follow the progress of a reaction.</p>	<p>Iodine clock reaction to generate data to establish rate law expression.</p>
evening	<p>Reaction mechanisms.</p> <p>Introduction to equilibrium</p>	<p>Page (581 – 582) – 67, 68, 70, 79, 84, 86, 87</p> <p>Water transfer lab. Graphical analysis.</p>

DAY 11	WHAT (skill goals, knowledge goals, concepts)	HOW (activities)
morning	<p>Equilibrium - Use results and graphs from water transfer lab to establish the conditions for a state of equilibrium to exist.</p> <p>Discuss - static equilibrium, - physical equilibrium in the (Liquid water - water vapor system) - chemical equilibrium using the hydrogen + iodine \rightleftharpoons hydrogen iodide reaction.</p> <p>Analysis of Haber process for ammonia to consider the concept of shifting an equilibrium.</p> <p>Le Chatelier's Principle.</p> <p>Application to the Haber process</p>	<p>Student lab for shifting an equilibrium. Reaction of Iron III ion with thiocyanate ion.</p> <p>Page 555 – 6</p> <p>Page (581 -582) – 50, 51, 52, 73, 74, 75, 83, 84, 86</p> <p>Demo the effect of changing temperature and pressure using the Nitrogen dioxide equilibrium.</p>
afternoon	<p>Introduction of the equilibrium constant.</p> <p>The form of the expression. Inclusion of concentrations of gases and aqueous ions.</p>	<p>Page (557 -558) – 7, 8, 9, 10</p> <p>Student lab - equilibrium between chromate and dichromate ions in solution</p>
evening	<p>Solubility equilibrium, the solubility product constant.</p> <p>Significance of the magnitude of the constant.</p> <p>Using the constant to find molar concentrations and solubilities.</p> <p>Finding the constant using molar ionic concentrations.</p> <p>Predicting the formation of precipitates.</p> <p>The common ion effect.</p>	<p>Page 562 – 17, 18, 19, 20, 23, 24, 26, 27</p>

DAY 12	WHAT (skill goals, knowledge goals, concepts)	HOW (activities)
morning	<p>Acids and bases - physical and chemical properties, nomenclature.</p> <p>Evolution of the definition of acids and bases - Arrhenius, Bronsted-Lowry, Lewis.</p> <p>Using Bronsted-Lowry definition - conjugate acid-base pairs.</p> <p>The pH scale - definition of pH, the ion-product of water constant. Definition of pOH</p> <p>Strong and weak acids and bases. Definition of the acid dissociation constant.</p>	<p>Demo - red cabbage juice as acid-base indicator</p> <p>Page (596 – 610) – 9, 10, 11, 12, 13, 14, 15, 16, 20, 21, 23</p>
afternoon	<p>Reaction of acids and bases - neutralization</p> <p>Titration techniques - equipment needed - burets, pipets, etc. - choosing appropriate acid-base indicators.</p>	<p>Student lab - %acetic acid in commercial vinegar</p> <p>Student lab - comparison of effectiveness of commercial antacids.</p> <p>Student lab - analysis of aspirin tablets for ASA</p>
evening	<p>Hydrolysis of salts - impact on indicator choice for titration.</p> <p>Buffer solutions - impact on living systems.</p>	<p>Demo - reaction of water with various salts</p> <p>Page (625 – 626) – 45, 48, 52, 53, 56, 65, 73, 74, 97, 98</p>

DAY 13	WHAT (skill goals, knowledge goals, concepts)	HOW (activities)
morning	<p>Oxidation and Reduction</p> <p>Definitions of redox from reactions with oxygen to loss and gain of electrons to changes in oxidation number.</p> <p>Assigning oxidation numbers.</p> <p>The balancing of redox equations: 1) by using oxidation number 2) by the half-cell method (in both acid and base solutions)</p>	<p>Demo to illustrate activity series. Extend to see these reactions as redox reactions.</p> <p>Page (649 – 654) – 19b, 20, 21, 25</p> <p>Page (657 -659) – 35, 36, 40, 45, 65</p>
afternoon	<p>Redox Applications</p> <p>Electrochemical Cells - converting chemical energy into electrical energy. The Daniell Cell and extension to other electrochemical cells.</p> <p>Definition of cell potential.</p> <p>Electrolysis - converting electrical energy to chemical energy</p>	<p>Demo of removing tarnish from silver</p> <p>Student lab to measure the cell potential of cells with various combinations of metal electrodes.</p> <p>Demo to illustrate the electrolysis of water and of brine (salt-water solution)</p>
evening	<p>Application of redox principles to batteries of various types, and to corrosion</p>	<p>Student presentations .</p>

DAY 14	WHAT (skill goals, knowledge goals, concepts)	HOW (activities)
morning	<p>Organic Chemistry - the chemistry of carbon</p> <p>Introduction - the scope and importance of organic chemistry.</p> <p>Classes of compounds - hydrocarbons - names, chemical formulas and structural formulas.</p> <p>- alkanes, alkenes, alkynes and cyclic hydrocarbons. Existence of isomers. Systematic nomenclature for hydrocarbons. Halogenated hydrocarbons.</p> <p>- benzene - a unique hydrocarbon. Resonance in the bonding of benzene.</p> <p>Simple reactions of hydrocarbons.</p>	Student lab to prepare acetylene and study its properties.
afternoon	<p>Organic compounds containing oxygen.</p> <ul style="list-style-type: none"> - nomenclature and simple reactions of alcohols, ethers, aldehydes, ketones and esters. <p>Polymers - different types and uses</p>	. Demo to prepare a simple polymer.
evening	No evening class on Thursday of third week	

Day 15 – The last Friday – The Post-test is written in the morning session, the only class scheduled for the day.
